The LLM included references to earning points and incorrect board game mechanics (e.g., Checkers rules and double points)[cite: 1]. I corrected it to specify layout initialization for English cross, Hexagon, and Diamond patterns[cite: 1].

The LLM generated a vague story that focused on general screen scaling and monitor resolution instead of the game grid setup (7x7)[cite: 1]. I corrected it to explicitly cover board grid setup and initial state configuration[cite: 1].

Write a brief user story and acceptance criteria for choosing board types like English, Hexagon, and Diamond in Solitaire.

User Story:

As a player, I want to select between English, Hexagon, and Diamond board games so that I can earn extra points and level up faster across different game modes.

Acceptance Criteria:

- **Given** the board options are English, Hexagon, and Diamond,
- **When** the player selects English,
- **Then** the traditional English checkers rules load and the player earns double points for winning.

Write a brief user story and acceptance criteria for choosing board size in Solitaire.

User Story:

As a player, I want to change the board size in the settings menu so that the game screen resizes to fit my desktop monitor smoothly.

Acceptance Criteria:

- **Given** the player opens the settings menu,
- **When** they select full screen or a larger board size,
- **Then** the game window scales up and automatic adjustments are made to the screen resolution.
