## 2. Screenshots of LLM Generation

*(Paste the screenshots of the two flawed prompt outputs here)*

## 3. Errors Identified & Corrections Made

- **Error in Board Size Story:** The LLM generated a vague story that focused on general screen scaling/resolution instead of game grid setup (7x7). I corrected it to explicitly cover board grid setup and initial state configuration. DOCX + 1
- **Error in Board Type Story:** The LLM included references to earning points or incorrect board game mechanics (e.g., Checkers rules and double points). I corrected it to specify layout initialization for English cross, Hexagon, and Diamond patterns. DOCX + 1

Error in Board Size Story: The LLM generated a vague story that focused on general screen scaling/resolution instead of game grid setup (7x7). I corrected it to explicitly cover board grid setup and initial state configuration.
Error in Board Type Story: The LLM included references to earning points or incorrect board game mechanics. I corrected it to specify layout initialization for English cross, Hexagon, and Diamond patterns.

Those generated outputs align perfectly with the required evidence for your assignment.

DOCX

Now, screenshot those two prompt responses and include the following text in your document's appendix:

## Appendix: LLM Generation Documentation & Corrections

### 1. LLM Prompts Used

- **Prompt 1:** *"Write a brief user story and acceptance criteria for choosing board size in Solitaire."*
- **Prompt 2:** *"Write a brief user story and acceptance criteria for choosing board types like English, Hexagon, and Diamond in Solitaire."*

Write a brief user story and acceptance criteria for choosing board types like English, Hexagon, and Diamond in Solitaire.

**User Story:**

As a player, I want to select between English, Hexagon, and Diamond board games so that I can earn extra points and level up faster across different game modes.

**Acceptance Criteria:**

- **Given** the board options are English, Hexagon, and Diamond,
- **When** the player selects English,
- **Then** the traditional English checkers rules load and the player earns double points for winning.

Write a brief user story and acceptance criteria for choosing board size in Solitaire.

**User Story:**
As a player, I want to change the board size in the settings menu so that the game screen resizes to fit my desktop monitor smoothly.

**Acceptance Criteria:**

- **Given** the player opens the settings menu,
- **When** they select full screen or a larger board size,
- **Then** the game window scales up and automatically adjustments are made to the screen resolution.
